

Kempower to showcase modular and scalable EV fast charging solutions at Busworld Europe 2023

- *Kempower will present its DC fast charging solutions portfolio at Booth 833 at Busworld Europe between October 7th and 12th in Brussels, Belgium.*
- *The modularity and scalability of Kempower's DC fast charging solutions enable electric fleet owners to easily scale up their charging infrastructure as their fleets grow.*
- *Kempower ChargEye for Depot, a cloud-based charging management software, helps fleet owners run safe and secure depots and offer reliable services to the public.*

BRUSSELS, BELGIUM – Kempower will present its state-of-the-art EV fast charging solutions at Busworld Europe 2023 between October 7th and 12th in Brussels, Belgium. The company's experts will be at the event at Booth 833a in Hall 8.

Kempower offers a complete DC fast charging solution with a modular and scalable design, making it easy for operators to scale up charging infrastructure as their electric fleet expands. The company's dynamic power distribution capabilities allow charging capacity to be dynamically distributed to vehicles, such as electric buses, that need charging the most, maximizing available kilowatts at depots and charging hubs.

Kempower's product offering also includes [Kempower ChargEye for Depot](#), a cloud-based charging management software that helps operators run safe and secure depots and minimizes total cost of ownership. The platform allows charging to be monitored and controlled in real-time and enables dynamic load sharing, which reduces idle time and prevents overload in the charging system.

Products that Kempower will showcase at its exhibition booth include the [Kempower Satellite charging system](#), [Kempower Liquid Cooled Satellite](#), [Kempower Pantograph Down](#), and [Kempower Movable Charger](#). Three members of the company's management team will also attend the event – Chief Sales Officer Tommi Liuska, Chief Service Business Officer Juha-Pekka Suomela and Chief Markets Officer Jussi Vanhanen.

Commenting on the company's presence at the upcoming Busworld event, **Tommi Liuska** said:

"Decarbonizing public transportation is a top global priority, with increased numbers of electric buses deployed across cities worldwide. Our charging technology is playing a crucial role in this e-mobility transition by providing easily scalable charging infrastructure with dynamic charging capabilities, enabling fleet operators to run reliable and efficient services. We look forward to meeting with current and prospective customers at Busworld Europe and sharing our fast-charging expertise."

Kempower in brief

We design and manufacture reliable and user-friendly DC fast-charging solutions for electric vehicles. Our vision is to create the world's most desired EV charging solutions for everyone, everywhere. Our product development and production are based in Finland, with the majority of our materials and components sourced locally. We focus on all areas of e-mobility, from electric cars, trucks, and buses to machines and marine. Our modular and scalable charging system and world-class software are designed by EV drivers for EV drivers, enabling the best user experience for our customers around the world. Kempower is listed in the Nasdaq First North Growth Market Finland.
